dexcomG6

HOW DOES THE DEXCOM G6 WORK?

APPLICATOR

- Simple auto-applicator to insert the sensor just beneath the skin

SENSOR

- Measures glucose levels for up to ten days
- Water-resistant wearable[†]

TRANSMITTER

- Fixed to the top of sensor
- Sends data wirelessly to a display device
- 3-month battery life

DISPLAY DEVICE

- Dexcom receiver or compatible smart device[†]

WHAT IS CONTINUOUS GLUCOSE MONITORING?

Continuous glucose monitoring (CGM) systems are diabetes management tools that measure glucose at regular intervals using a sensor inserted just under the skin. The device transmits glucose readings wirelessly to an external device.

With Dexcom CGM, you only need to glance at your smart phone or watch[†] to know where your glucose levels are, where they are heading and how fast – all with zero fingersticks* or scanning.

WHO CAN BENEFIT FROM A CGM SYSTEM?

- Patients with type 1 diabetes, from 2 years old, including pregnant women.
- It works whether you are using Multiple Daily Injections (MDI) or an insulin pump.

CGM may be particularly helpful if you:

- Are not at your HbA1c goal
- Have hypoglycaemia unawareness
- Have glycaemic variability
- Have hyperglycaemia due to fear of hypoglycaemia

READY TO EXPERIENCE THE DEXCOM DIFFERENCE?

URGENT LOW SOON ALERT

Sometimes, glucose can fall quickly. A predictive Urgent Low Soon alert can warn you up to 20 minutes before a serious hypo (≤ 3.1 mmol/L) allowing you time to take action to help prevent it.

URGENT LOW ALARM

A non-customisable alarm that is triggered if glucose levels fall below 3.1 mmol/L – helping you to safeguard against hypoglycaemia.

PUMP INTEGRATION

Dexcom G6 is also intended to autonomously communicate with digitally connected devices, including automated insulin dosing (AID) systems.

EXCEPTIONAL ACCURACY^{1,2}

You can make treatment decisions, even when your glucose is high or low, or rapidly rising or falling.*²

HIGH AND LOW ALERTS

Your Dexcom G6 gives you the power to customise your alerts so you can know when you're high or low. You can also set custom schedules for day vs night and weekday vs weekend, offering you more flexibility.

SHARE GLUCOSE DATA⁵

Widen your support circle with Dexcom Follow. You can share your glucose data and alerts with up to 5 followers, for added peace of mind.

REAL-TIME READINGS

With just a quick glance at your smartphone or watch,¹ you can know where your glucose levels are, where they are heading and how fast so you can take action – **all with zero fingersticks* and scanning.**

MULTIPLE INSERTION SITES

Dexcom G6 can be worn on the abdomen or back of the upper arm for adults as well as on the upper buttocks for those <18 years old – offering more flexibility and choice of where you choose to wear Dexcom.

*If your glucose alerts and readings from the G6 do not match symptoms or expectations, use a blood glucose meter to make diabetes treatment decisions.
