

Promatica and Over Wyre Case Study

WWW.PROMATICADIGITAL.CO.UK

Overview

Over Wyre Medical Centre partnered with Promatica to deliver a pharmacist-led Continuous Glucose Monitoring (CGM) service. Leveraging Promatica's innovative PRISM software, the initiative aimed to enhance patient outcomes while streamlining healthcare operations.

Key Results

- Identifying Candidates: Promatica's PRISM software efficiently identified **33 out of 51 Type 1 diabetes patients** meeting NG17 criteria and who wished to be considered for CGM initiation.
- Positive Outcomes: In the 6 months post-initiation, these patients experienced a **remarkable 9.1% reduction in average HbA1c** and there was a **28% decrease in appointment consumption** in the same population.
- Cost-Efficiency:** there is more to real-time CGM than prescribing cost; reduced appointment and consumable expenses, alongside improved patient outcomes indicate the important role that better technology plays in the wider healthcare economic landscape.

Testimonial

"Promatica, and their Prism software, have been easy to work with. It's great to hear that our patients are benefitting from their new technology, and any reduction in appointments is great news for an over-stretched NHS!"

Chris Hill, Practice Pharmacist.

Conclusion

Over Wyre Medical Centre, in partnership with Promatica, have pioneered a transformative approach to diabetes management. The success of this initiative underscores the potential of pharmacist-led interventions, when supported by leading edge software and health technology.
